1 About MyQ OCR Server 3.1

Optical Character Recognition (OCR) is a service that converts scanned documents to a searchable and editable format, such as an MS Word document or a searchable PDF. To employ this functionality in MyQ, you can either use the MyQ OCR server, which is a part of the MyQ solution, or you can use a third-party application.

Unlike third-party OCR applications, the MyQ OCR Server is integrated with the MyQ system, which makes it simple to install and easy to use.

Within the installation of the server, you can utilize the **Tesseract** engine.

 All changes compared to the previous version are listed in the [release notes](#).

2 Release Notes

MyQ OCR Server 3.1

2.1 3.1 RTM

29 June, 2023

Improvements

- Mako updated to 6.6 and converted to .NET6.

Bug Fixes

- OCR layer rotated by 90 degrees for some PDFs scanned on Epson terminals.
-

3 System Requirements

The following specifications are required to set up and run MyQ OCR Server 3.1.

- Operating System:
 - Windows Server 2012/2012 R2/2016/2019/2022, with all the latest updates; only 64bit OS supported.
 - Windows 8.1/ 10/ 11, with all the latest updates; only 64bit OS supported.
- Required level of privileges: user with administrator rights.
- Memory for processing multi-page documents: 1GB RAM minimum, 1,5GB recommended.
- HDD space: 1.6 GB for the installation.
- It is recommended to deploy the OCR server on a dedicated server.
- OCR Service is registered after the installation and, by default, it is running under the Local System account.

 MyQ OCR Server 3.1 requires MyQ Print Server 10+.

4 Setting up OCR in MyQ

Go to the MyQ web administrator interface, in the **Scanning & OCR** settings tab (**MyQ, Settings, Scanning & OCR**). In the **OCR** section, make sure that the OCR feature is **Enabled**. If not, enable it.

The screenshot shows the OCR settings configuration page. At the top, there is a dropdown menu labeled 'OCR'. Below it, the 'Enabled' toggle is turned on (red). The 'OCR server type' is set to 'Custom OCR server' (selected with a radio button). A note explains that scans for the profile 'Searchable PDF' are stored in a folder according to the profile name 'InSearchable PDF', and that the folder locations are relative to the OCR working folder. The 'MyQ OCR Server' option is unselected. The 'OCR working folder' is set to '%app%\OCR'. A note states that the OCR server needs permission to write to this folder and that '%app%' is the MyQ data folder. Below this, there is a 'Profiles' section with 'Add', 'Edit', and 'Delete' icons. A table with a 'Name' column is shown, but it is empty. A 'The list is empty' message and an 'Add' button are present. At the bottom, there are 'Save' and 'Cancel' buttons. A footer note says 'Fields marked by * are mandatory.'

In the **OCR server type**, select *MyQ OCR Server*.

In the **OCR working folder** field, you can change the folder where the scanned data is sent to. It is recommended to use the default folder (*C:\ProgramData\MyQ\OCR*), unless there is a major reason for it. The same folder will have to be set as the **Working folder** on the OCR Server (see [MyQ OCR Server Configuration](#)).

- Both the MyQ server and the OCR server must have full access (read/write) to the OCR working folder.

The OCR folder contains three sub-folders: *in*, *out*, *profiles*. In the *in* folder, the scanned documents are stored before being processed. In the *out* folder, the processed documents are saved by the OCR software and are ready to be sent. In the *profiles* folder, your OCR profiles are stored.

To enable users to convert documents to a specific output format, you need to create a profile of that type. The users will be able to send scans to use this profile either via a special email command or by selecting the profile when scanning via the **Easy Scan** terminal action on MyQ embedded terminals.

To create a new profile:

1. Click **+Add** next to **Profiles**. A new item with the settings of the new profile appears in the list below.
2. Type the **Name** of the profile, select the **Output format** from the list, and then click **OK**. The profile is saved.

To edit a profile:

1. Select the profile on the list and click **Edit** (or right-click and select **Edit** in the shortcut menu).
2. In the profile editing options, you can change the name and the output format of the profile.

To delete a profile, select it and click the **X** (delete) button on the ribbon (or right-click and select **Delete** in the shortcut menu).

Click **Save** at the bottom of the screen to save your changes.

5 Installation

To install the MyQ OCR Server:

1. Download the latest available version of the MyQ OCR Server from the MyQ Community portal (MyQ OCR Server X.X.X.X).
2. Run the executable file. The OCR Server installation window appears.

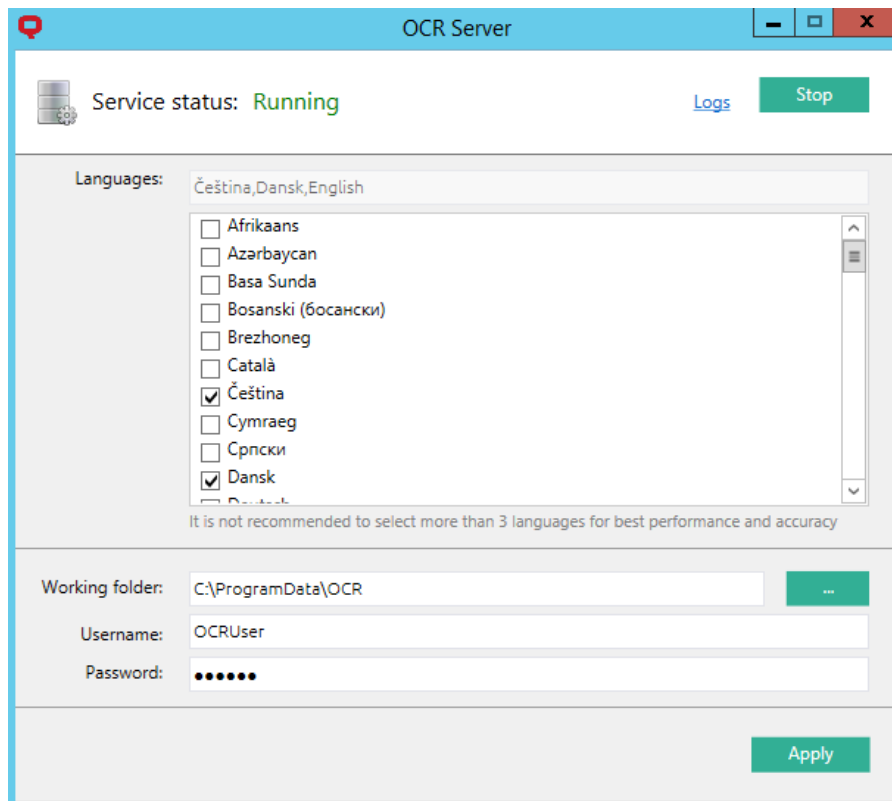

3. Select the folder where you want to install the OCR server. The default path is: *C:\Program Files\MyQ OCR Server*.
4. After this, you need to agree to the license terms and conditions to continue with the installation. Then click **INSTALL**. The OCR server is installed.
5. Click **Finish** to leave the installation wizard. The configuration window of the OCR server appears. The configuration steps are described below.

i In case the file is blocked from your browser or OS, click **Run** or **Allow**, or modify your Windows Security settings to allow the installation of unknown apps (turn off **App & browser control**).
 If you get the "Windows protected your PC" message when trying to run the file, click **More info**, and then click **Run anyway**, to begin the installation.
 If you still cannot run the file, right click on it, and select **Properties**. In the **General** tab, next to **Security**, mark the **Unblock** checkbox, click **Apply**, and then **OK**. Run the file again and begin the installation.

6 MyQ OCR Server Configuration

The MyQ OCR Server can be configured in the OCR Server configuration window that opens automatically once the server's installation is finished. It can also be opened via the **MyQ OCR Server Settings** application in Windows apps.

In the configuration window, you can also stop and start the Windows service of the OCR server, and open logs.

- **Languages** - While you can select all the [available languages](#), it is recommended to select only those that are likely to be used within the OCR process. Selecting less languages increases the speed and accuracy of the OCR process.
- **Working folder** - This is the folder where the OCR server and the MyQ server exchange the OCR scanned files. The path entered here has to be the same as the path to the OCR working folder, set on the **Scanning & OCR** settings tab in the MyQ web administrator interface (the default folder is `C:\ProgramData\MyQ\OCR`). In case you use a shared folder, enter the **Username** and **Password** for access to the folder.

 Both the MyQ server and the OCR server must have full access (read/write) to the OCR working folder.

Click **Apply** for your changes to take effect.

To open the log files, click **Logs** at the top-right corner of the OCR Server configuration window.

To stop or restart the OCR Server Windows service, click **Stop** (or **Start**) at the top-right corner of the OCR Server configuration window. You can also manage the service in the Windows Task Manager, where it is called *OCRSERVICE*.

6.1 Tesseract engine

Tesseract is an open source text recognition (OCR) engine, used by MyQ in the MyQ OCR Server.

The following formats are supported with the Tesseract OCR engine:

- *PDF*
- *PDF/A* (the compliance level of PDF/A is **PDF/A-1B**)
- *TXT*

Tesseract supports a variety of languages, listed in [Supported languages](#).

 For further information about the engine, see the dedicated documentation from its developer.

6.2 Supported languages

The following languages are supported and can be processed by the Tesseract OCR engine used by the MyQ OCR Server:

Afrikaans (afr), Albanian (sqi), Azerbaijani (aze), Belarusian (bel), Bosnian (bos), Breton (bre), Bulgarian (bul), Catalan (cat), Cebuano (ceb), Corsican (cos), Croatian (hrv), Czech (ces), Danish (dan), Dutch/Flemish (ndl), English (eng), English Middle 1100-1500 (enm), Esperanto (epo), Estonian (est), Faroese (fao), Filipino (fil), Finnish (fin), French (fra), Gaelic (gla), Galician (glg), German (deu), Haitian (hat), Hebrew (heb), Hungarian (hun), Icelandic (ici), Indonesian (ind), Irish (gle), Italian (ita), Japanese (jpn), Javanese (jav), Kyrgyz (kir), Latin (lat), Latvian (lav), Lithuanian (lit), Macedonian (mkd), Malay (msa), Maltese (mlt), Maori (mri), Norwegian (nor), Occitan (oci), Polish (pol), Portuguese (por), Quechua (que), Romanian/Moldovan (ron), Russian (rus), Serbian (srp), Serbian Latin (srp_latn), Slovak (slk), Slovenian (slv), Spanish (spa), Sundanese (sun), Swahili (swa), Swedish (swe), Tajik (tgk), Tonga (ton), Turkish (tur), Ukrainian (ukr), Uzbek (uzb), Uzbek Cyrillic (uzb_cyrl), Vietnamese (vie), Welsh (cym), Western Frisian (fry), Yoruba (yor), *Азәрбајҹан, ქართული ენა* - Georgian.

Selecting multiple languages will take much more time to process the files.

7 Scanning to OCR

7.1 Scanning to OCR via Panel Scan

To send the scanned document to be processed by the OCR server, the user needs to type the receiver email address in the form: `myqocr.*profilename*@myq.local` where **profilename** is the name of the profile for the requested output, for example *ocrpdf* or *ocrtxt*.

OCR is case sensitive. If you use **Panel Scan**, the email address `myqocr.*folder*@myq.local` must be the same as the OCR profile name.

The document is converted by the MyQ OCR Server and sent to the folder or email address that is set in the **User's storage** text box on the user's properties panel in the MyQ web administrator interface.

 Scanning to OCR via Panel Scan is deprecated in MyQ Print Server 10.2. Scanning to OCR via Easy Scan should be used instead.

7.2 Scanning to OCR via Easy Scan

The MyQ administrator can create any number of **Easy Scan** terminal actions for scanning to OCR. They can either create one **Easy Scan** action for each output or let the scanning user select the format themselves.

To enable users to scan to a specific profile, select the profile (such as *ocrpdf* or *ocrtxt*) among the values of the **Format** parameter of the **Easy Scan** action.

The screenshot shows a configuration window titled "Format" with a close button (X) in the top right. The window contains several fields and a dropdown menu:

- Title:** Format
- Type:** Code List
- Code Book:** Format
- Default value:** A dropdown menu is open, showing a list of options: PDF, JPEG, TIFF, XPS, HCPDF, Default, **OCRPDF** (highlighted in blue), OCRPDFA, and OCRTXT.
- Required:** PDF
- Prohibit change of value:** JPEG
- Advanced:** A section with a dropdown arrow, containing: XPS, HCPDF, Default, **OCRPDF** (highlighted in blue), OCRPDFA, and OCRTXT.
- Reference:** A field with a red arrow pointing to the left, containing the text "OCRPDF".

You can also enable users to select the profile themselves. For more information about how to set up the **Easy Scan** action on a MyQ Embedded terminal, see [OCR](#) and the "Easy Scan to OCR" section in the embedded terminal's manual.

7.3 OCR Processing

The OCR software should listen to the document sub-folders of the *in* folder (*in\OCRPDF*, *in\OCRTXT*,...), process the file sent there, save the converted document to the *out* folder, and delete the source file from the *in**** folder.

MyQ listens to the *out* folder, sends the converted file to the predefined destination (receiver email or email/folder defined on the Destinations tab), and deletes it from the folder.

The file sent to the *out* folder by the OCR software must have the same name as the source file in the *in**** folder. If the name of the converted file differs from the source file, it is deleted without being sent to the user.

8 Update and Uninstallation

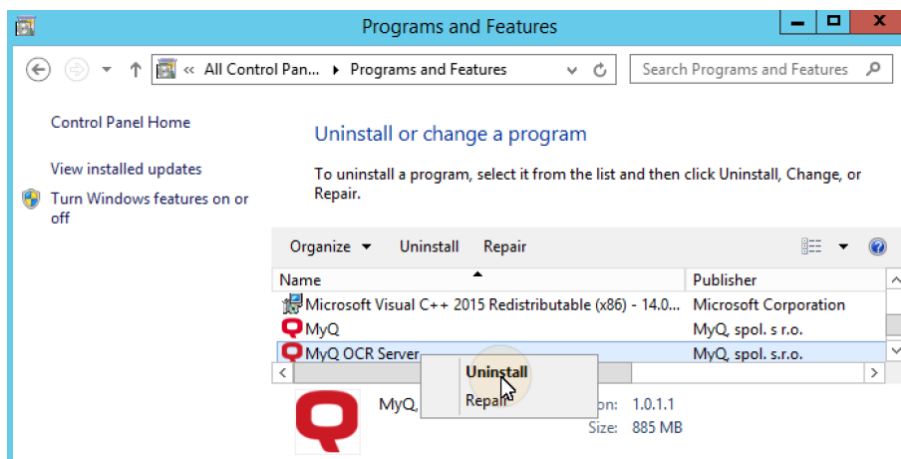

8.1 Updating the MyQ OCR Server

Download and run the latest available version of the MyQ OCR Server from the MyQ Community portal. The update process in the update wizard is identical to the MyQ OCR Server installation.

8.2 Uninstalling the MyQ OCR Server

The MyQ OCR Server can be uninstalled via the Windows Control Panel.

Go to **Control Panel > Programs and Features**, find and select the MyQ OCR Server application on the list, and click **Uninstall** on the ribbon (or right-click and select **Uninstall**).
