

## MyQ Print Server 10.0

**⚠** MyQ 10.0 has reached End of Life. The **MyQ 10.1** update is now available. MyQ Print Server 10.1: [Documentation & Release notes](#)  
See the [MyQ Product & Support End-of-Life Policy](#).

- Minimum required support date: **1 February 2022**
- Minimum required version for upgrade: **8.2**
- MPA 1.3+, OCR Server 3.0+, and latest Mobile applications for 10.0 are required

## 10.0 (Patch 13)

22 March, 2023

### Security

- Refresh token could be visible in the log, now fixed.

### Improvements

- Traefik updated.
- OpenSSL updated.

### Bug Fixes

- Report Projects - Project groups total summary does not display paper format values.
- Version of old terminal package after server upgrade (from 7.4 and lower) is displayed as zeros instead of question mark.
- MDC not updating when enabling/disabling Credit or Quota when MDC is already connected to Print Server.
- HW-11-T - Cannot convert string from UTF-8 to ASCII.
- Easy scan - password parameter - the MyQ web UI language is used for the string of password parameter.
- Cannot get refresh token from Azure if HTTP proxy has some no longer working value (even if switched off).
- Failed scan to incorrect email address may block outgoing email traffic.
- Printser filter does not filter devices correctly in some cases.
- LDAP Code Book Favorites not on top.
- Watermarks on PCL6 job - document has wrong dimensions in landscape mode.
- Job properties - Punching isn't applied on Ricoh devices.

### Device Certification

- Added support for Epson EcoTank M3170.
- Ricoh IM C3/400 - added simplex and duplex counters.
- Added support for Toshiba e-STUDIO7527AC, 7529A, 2520AC.
- Sharp MX-B456W - corrected toner level reading.

---

## 10.0 (Patch 12)

8 February, 2023

### Security

- Fixed issue where any user could export users by using URL.

### **Improvements**

- Apache updated.

### **Bug Fixes**

- MS Universal Print - cannot print from win 11.
- Counters in Reports do not match on central after site replication in some rare cases.
- Fix of memory leak.
- System History Deletion is deleting favorite codebooks.
- RefreshSettings is called every time when replications are requested.

### **Device Certification**

- Removed embedded terminal support of HP M479.
- Added support for Epson AM-C4/5/6000 and WF-C53/5890.
- Added support for Xerox B315.
- Added support for Epson AL-M320.
- Added support for Canon iR-ADV 4835/45.

### **Limitations**

- Embedded Lite - printed XPS documents are stuck in Ready status and are never marked as Printed.
- 

## **10.0 (Patch 11)**

### **Improvements**

- Traefik updated.

### **Changes**

- MyQ internal SMTP Server is kept enabled, but firewall rules are removed when disabled.

### **Bug Fixes**

- Site server mode - Possible to create User rights with keyboard shortcut.
- Upgrade to installation key via wizard could finished with error, when skipping generating XML file.
- Untranslated string appears when searching in project groups.
- No translation of "No project" in metadata XML of scans.
- Report Project groups - Total summary wrongly contains user-related columns.
- Jobs via Email does not work when Network > MyQ SMTP Server is disabled.
- System maintenance task is not deleting failed email attachments.
- Report Printers - Total summary - data not grouped correctly.
- Job parser could fail in some specific cases.
- Authentication to Exchange Online is not successful sometimes.
- Setting rights for users on Site to "Manage project" does not allow user "Manage Projects" on site.

### **Device Certification**

- Epson L15180 cannot print large (A3) jobs fixed.
-

## 10.0 (Patch 10)

### Improvements

- Parser updated.
- Security improved.
- Translations - Unified translation strings for quota period.
- Added new translation string for “remaining” (required by some languages with different sentence composition).
- PHP updated.
- OpenSSL updated.
- Improved debug logging for SMTP server with OAuth login.

### Changes

- Added banner to Web UI for expired or to be expired assurance (perpetual license only).

### Bug Fixes

- MyQ Service could crash in some very rare cases during releasing of jobs when one user had 2 user sessions active.
- Security improvement.
- Reports "General- Monthly Statistic/Weekly Statistics" - values for same week/month of different year is merged to one value.
- CSV User import may fail when updating existing users.
- Google Drive scan storage destination may appear as disconnected in Web UI.
- Printer discovery is in loop when invalid filename template file is used.
- Wrong Synchronization of user accounting group/Cost center after changing Accounting mode on Central Server.
- Terminal package status is not updated after Health check detected some problem which was resolved.
- traefik.exe security improved.
- Modifying config.ini to icmpPing=0 doesn't check the OID.

### Device Certification

- Added additional model names for HP Color LaserJet managed MFP E78323/25/30.
- Added support for HP Color LaserJet MFP M282nw.
- Added support for Canon MF631C.
- Added support for Toshiba e-Studio 385S and 305CP.
- Added support for OKI MC883.
- Added support for Brother MFC-J2340.
- Added support for Toshiba e-STUDIO25/30/35/45/55/6528A and e-STUDIO25/30/35/45/55/6525AC.
- Added support for Canon iR-ADV 4825.
- Added support for Epson WF-C529R.
- Added support for Lexmark MX421.
- Added Simplex/Duplex counters for multiple Xerox devices (VersaLink B400, WorkCentre 5945/55, WorkCentre 7830/35/45/55, AltaLink C8030/35/45/55/70, AltaLink C8130/35/45/55/70, VersaLink C7020/25/30).
- Added support for Lexmark B2442dw.
- Added A4/A3 counters for multiple Toshiba devices (e-STUDIO20/25/30/35/45/5008A, e-STUDIO35/4508AG, e-STUDIO25/30/35/45/50/5505AC, e-STUDIO55/65/7506AC).
- Added support for Brother HL-L8260CDW.
- Added support for Canon iR C3226.
- Added support for Ricoh P C300W.

## 10.0 (Patch 9)

### Improvements

- Removed Prescribe when printing from Kyocera drivers to non Kyocera devices.
- Added option to set custom MyQ CA certificate validity period (in config.ini).
- PHP updated.

### Changes

- Banner for expired or to be expired assurance (perpetual license only) was removed.

### Bug Fixes

- Print Server changes finishing options for booklet (Kyocera drivers).
- Jobs via email - MS Exchange online - change of server is not correctly saved.
- Opening job preview in Web UI - address contains hostname instead of FQDN.
- User synchronization from Central - Inherited manager for nested groups in not synchronized.
- Cannot set duplex option on embedded terminal for jobs via email or web upload.
- Delegate selection isn't saved in some cases.

### Device Certification

- Changed device name of P-3563DN to P-C3563DN and P-4063DN to P-C4063DN.
- 

## 10.0 (Patch 8)

### Improvements

- Added banner for expired or to be expired assurance (perpetual license only) - **important: banner is displayed also on Embedded terminals login screen in this server version, this was not intended and this will be removed from next server release version (banner message for Embedded terminal is managed by server).**

### Bug Fixes

- Payment account interaction is not Disabled if accounting is switched from Accounting group to Cost center mode.
  - Credit Statement and Credit reports data are deleted based on settings of "Delete logs older than".
  - User synchronization fails when group name contains half-width and full-width characters.
  - Log & Audit - Check new records misses default value.
  - Built-in Certificate Authority generate from PS not working on macOS.
  - User CSV export/import does not reflect multiple Cost Centers.
  - Codebooks - when searching value by "Code", no result is found.
  - Upgrade of terminal package activates/installs even deactivated printers.
- 

## 10.0 (Patch 7)

### Improvements

- **NEW FEATURE** Mixed size parameter for Easy copy is supported.

- Added digital signature to EasyConfigCmd.exe.
- Notify the Desktop Client about paused jobs when the client is registered into the server.

### Changes

- Self signed MyQ CA certificate is valid for 730 days (because of MDC for Mac).

### Bug Fixes

- MyQ-generated server certificate is not accepted by Canon.
- Printing on Toshiba printer via edited job properties does not print correctl.
- Printing on Sharp - document is printed with short edge binding when it's set long edge.
- Reports in XLSX have number fields formatted as text.

### Device Certification

- Added support for Canon iR-ADV 6860/6870.
- 

## 10.0 (Patch 6)

### Improvements

- PM Server certificates updated.
- Traefik updated

### Bug Fixes

- Login via QR code wasn't possible from the device panel.
- Error when scanning with ProjectId=0.

### Device Certification

- Added support for Toshiba e-STUDIO 2505H.
  - Added support for Sharp BP-50,60,70Cxx.
  - Added support for Xerox VersaLink C7120/25/30.
  - Added support for Kyocera VFP35/40/4501 and VFM35/4001.
  - Added support for HP Officejet Pro 6830.
- 

## 10.0 (Patch 5)

### Improvements

- Web UI performance of Jobs page improved in case of big amount of jobs.
- MyQ X Mobile Client settings improved (possible to use hostname and port of Print Server or custom settings).
- Apache updated.
- PHP updated.
- Gmail External system - possible to re-add External system using same id and key.
- OpenSSL updated.
- Security improved.
- **NEW FEATURE** New report 'Project - User Session details'.

### Changes

- VC++ runtime updated.

## Bug Fixes

- LDAP User Synchronization - switching tab without server/username/pwd filled causes web server error.
- Space in user name causes failure to upload the scanned file to OneDrive Business.
- Printing on Sharp - document is printed with short edge binding when it's set long edge.
- External codebook - favorited items are deleted too aggressively.
- Log highlights are not exported to Data for support.
- Scan via SMTP - Scan does not arrive when Printer is saved under Hostname.
- Easy Config crashes when password of account (under which services are running) is changed.
- LPR Server stops accepting print jobs.
- "Service MyQ\_XXX not running" is falsely reported right after services have started.
- System management - Maximum upload file setting is present.
- Possible to save invalid value (null) in database, when enabling jobs via email (OAuth) causing web server error.
- Duplicated login prompt for user login of MDC, when job is paused and projects enabled.
- Release blocked credit in user's detail does not work.
- Print server crash when database is unreachable during job accounting.
- Web UI - Columns in sidebar grids behave inconsistently.
- Easy config health checks exceeded the timeout of 10 seconds.
- Parsing of specific PDF document failed (document trailer not found).
- Counters history is never successfully replicated when printer has no MAC address.
- Refreshing filtered (some timeframe) Log causes Web server error.
- Terminal actions - Code Book parameter's Default value is removed after change of a field or 2nd save.
- Delete operation is inconsistent in MyQ web UI.
- MS Exchange Address Book connection does not work.
- In some cases System health check fails (Failed to create COM object `Scripting.FileSystemObject').

## Device Certification

- Added new model name for HP E77650.
- Fixed scan counters for Ricoh IM C300.
- Added support for Ricoh SP3710SF.
- Added multiple Kyocera and Olivetti devices.
- Added support for Canon iR2004/2204.
- Kyocera ECOSYS MA4500ix - corrected missing terminal support.
- Added support for Sharp BP-20M22/24.
- Model name changed of Olivetti d-COPIA 32/400xMF to d-COPIA 32/4002MF.
- Corrected idle detection for HP M501.
- Added support for Xerox VersaLink B7125/30/35.
- Added support for multiple Kyocera devices.
- Corrected toner reading for Epson WF-C579R.
- Added support for Epson L15150 Series.
- Added support for HP LaserJet M403.
- Added support for Ricoh IM7/8/9000.
- Added simplex/duplex counters for multiple NRG devices.
- Added support for Oce VarioPrint 115.
- Added support for Canon iR-ADV 8786/95/05.
- Added support for Toshiba e-STUDIO 478S.
- Added support for KonicaMinolta bizhub 3301P, bizhub 4422.
- Added support for Ricoh SP 3710SF.
- Added support for Xerox PrimeLink C9065/70.

## 10.0 (Patch 4)

### Improvements

- **NEW FEATURE** Added support for Gmail as SMTP/IMAP/POP3 server via OAUTH 2.0

### Bug Fixes

- Missing translation of Job rejection reason 1009.
  - Wrongly displayed Color settings of job on terminal for B&W document uploaded via Web UI.
- 

## 10.0 (Patch 3)

### Improvements

- Replacing expired Certificate of PM Server.
- Renamed "SPS/SJM" log subsystem to "MDC".
- License error notification emails is sent after 3 failed connection attempt instead of first one.
- Security improved.
- System Maintenance error after upgrade - recalculate indices individual table and log individual problems.

### Bug Fixes

- Log export to Excel: accented characters are corrupted.
- DB upgrade could fail in some cases when upgrading 10.0 Beta to 10.0 RC1 and RC2.
- Job roaming - Issue downloading larger job files to other sites.
- Report preview fails with any language other than English.
- Offline login - Synchronized data not invalidated after PIN/card deletion.
- Using LDAP server with auto-discovery causes Web server error when adding user synchronization.
- System health check takes too long in some cases and may time out.
- Second level context menu is too transparent in Edge/Chrome browser.
- Cost Centers: Quota account is not reported when the same user is logged in into two devices using the same quota account.
- Adding support license deactivates licenses for a brief time.
- Job scripting - queue policies are not applied when MoveToQueue method is used.
- Adding MS Exchange SMTP Server in Network settings causes error.
- Running print discovery immediately again causes Web server error.
- DB encryption of larger DB - status bar hangs and does not finish.
- Parsing of some specific jobs could fail.

### Device certification

- Fixed scan counters for Ricoh IM 2500,IM 3000,IM 3500,IM 4000,IM 5000,IM 6000.
  - Added support for Canon imageRUNNER ADVANCE C475.
  - Added support for HP Color LaserJet MFP M181.
  - Added support for Xerox PrimeLink B91XX.
-

## 10.0 (Patch 2)

### Bug Fixes

- Upgrade from 8.2 - Database upgrade fails if database is encrypted.
- 

## 10.0 (Patch 1)

### Improvements

- Traefik updated.

### Bug Fixes

- Upgrade form 8.2 - database cannot be upgraded if database password is not default.
- Apache is not reconfigured when hostname is changed.
- "Revert force mono/Force mono" of job displayed on terminals in Color option instead of BW/Color.

### Device Certification

- Fixed counters for scan on some Epson devices.
- 

## 10.0 RTM

### Improvements

- Changed some System health check messages to be more clear.
- User Synchronization - removed spaces in the email field before import (email with spaces is considered invalid).
- Reports UI - column properties dialog improved.
- Increase character limit of Printer Event actions email body and subject.
- Create relation between new and old accounting table in the DB for External Reports.
- Errors/Alerts of Easy Config (i.e. Embedded terminal services not running) are registered by System Health Check.
- Server performance improved after importing large number of users.
- Adding terminal package - Added note, that newly added terminal will run under localsystem account even MyQ services are running under defined user account.

### Changes

- OCR formats using Abby engine deleted after upgrading to OCR Server v3+ (supported formats are PDF, PDF/A, TXT).
- Maximum upload file size separated for Jobs (moved to Settings > Job > Jobs via Web) and other (i.e. uploading terminal package).
- Cannot permanently remove user with history of operations (possible after history deletion removes user's data). No possible to permanently delete user with positive credit balance.

### Bug Fixes

- Terminal uninstallation - Recent jobs (last 1 minute) are accounted once more to \*unauthenticated user.
- Printer Events > Toner Status Monitor event - history is missing status of each toner.
- Printer properties - Password can be only 16 characters (conf profile accept up to 64 chars).

- Easy Config crashes on Open file dialog for db restore location when link with location was opened prior to restore.
- Health checks are spamming the log when they're not resolved.
- Web Printing - color selection displays incorrect options.
- Terminal Actions - External Workflow - URL is empty when action is reopened.
- Replication stops working after Site is restored from DB backup.
- Widgets - Graphs are disproportional.
- Reports - aggregate column's Average operation is not working (shows sum).
- Mopria print is not working.
- Error when adding column in User group membership Report.
- Column "Personal number" can be added 2 times in Projects per user report.
- Reports - Incorrect error message when file with logo was deleted.
- Log Notifier - Rule text in e-mail multiplied.
- Reports - Row summary "Sum" for countless fields is available.
- Reports - Different results for Auto Align of columns of same type (left or right).
- Reports with job privacy - different results in report preview and fully generated report. Note that summary reports of jobs and printers only shows jobs owned by the user.
- SMTP Server - Not possible to connect to MS Exchange in some cases.
- Incorrect punching of a file with printing through Print All on the terminal from HP Universal Printing PCL6(Color) driver.

### Limitations

- **MANUAL SETUP REQUIRED** Before upgrade set temporary database password to default "masterkey".
- 

## 10.0 RC2

### Improvements

- Support for white theme background in Terminal Actions improved.
- Added new built-in themes for embedded terminals.
- OpenSSL updated.
- Apache updated.
- Traefik updated.
- PHP updated.
- Themes are now uploaded and managed in Settings > Personalization (no need to extract archive of theme to specific folder).
- Security improved.
- Data for support contains httperr\*.log file.
- Improved transition from MyQ OCR settings formats after upgrade from previous version.

### Changes

- Default email body for scanned document changed.
- Job properties - Color property options for queues and user policies changed.

### Bug Fixes

- Epson Easy Scan with OCR fails.
- Printer activation successful but with logged message "Printer registration failed with code #2:".
- Job archiving folder moved during upgrade - old path displayed in Web UI.
- SMTP Server - Not possible to connect to MS Exchange in some cases.

## 10.0 RC

### Improvements

- Possible to change the Thrift access port.
- Mobile printing via the https port instead of MyQ's IPPS to use only one port (Requires latest Mobile app and MPA).

### Changes

- **SYSTEM REQUIREMENT** Upgrade to 10.0 is possible only from 8.2.
- **SYSTEM REQUIREMENT** OCR 3.0+, MPA1.3+, and latest Mobile application is required.

### Bug Fixes

- Missing Job roaming folder icon on user's Web UI.
- Job roaming - download of all jobs in the job list with already downloaded jobs failed.
- Not possible to recharge credit via Webpay.
- DB views - missing view "FACT\_PRINTERJOB\_COUNTERS\_V2" for external reporting.
- User's Web UI - missing icons for Cloud storages.
- Jobs - Failed jobs - incorrectly aligned column Reason for rejection.
- Database upgrade could fail in some cases.
- Job Preview - not possible to save external tools settings.
- Not possible to enabled Job archiving.
- Tandem queue jobs are paused, even if credit disabled and user detection method changed from MDC to Job sender.
- Printer Discovery - Actions - Filters lost when action reopened.
- SQL User Synchronization - Save/Cancel buttons are part of Columns form.
- SQL User Synchronization - cannot save changed list separator.
- Not possible to recharge credit via PayPal.
- License migration - xml file is not downloaded via wizard.
- Scheduled printer discovery with larger nr. of discoveries could fail.
- User synchronization task ends with error when more the 100k users are synced from Central.

---

## 10.0 BETA2

### Improvements

- **NEW FEATURE** New default Terminal actions theme.
- Display popup to re-activate printers whenever it is required to apply changes.
- Variables available for printer event actions unified.
- Security of FTP server improved.
- **NEW FEATURE** Created read-only access account for database (for example for BI tools).
- Traefik updated.
- OpenSSL updated.
- Added Failed jobs section to User's web UI jobs.
- Added user notifications for web print parsing error in Web UI (can require certificate on Print Server and client PC for browser to display notifications).

### Changes

- Web UI notifications moved from the top to the bottom of the page.

- Enhanced accessibility switch moved from installer to the Web UI login page.

## Bug Fixes

- Missing translation in Novell user synchronization options.
- Upgrade from previous version with projects enabled - email queue has user detection set to MDC and cannot be changed.
- Database read-only account settings is missing "NEW" tag.
- Embedded lite - Send to me (email) button - incorrect email address set.
- Configuration profile - Vendor specific params section multiplies after adding another terminal package.
- Temporary cards displayed as persistent.
- Easy Config - Old port displayed after backup restore with different port number (actual port from backup is used).
- Replicating counters to Central Server could time out in some cases.
- AirPrint via MPA - job fails when page range of job is selected.
- Direct queue - Private queues cause high CPU usage of Firebird service.
- All queues are set to detect job owner by MDC after upgrade with Projects enabled (not just direct queues).
- Database upgrade could fail after upgrade from 7.1 to 8.2.
- Saving Server type Standalone - error "Password for communication May not be empty" displayed.
- Firewall rule for using MyQ FTP has been updated.
- The price for Copy jobs is wrongly calculated (uses price of prints).
- Upgrade from 8.1 to 8.2 doesn't start if DB password contains '&', '<' or '>' characters.
- Unhiding system health check message causes Web server error.
- Incorrect stapling of a job with printing through "My Jobs" on the terminal.
- Rights for Scheduled task don't allow to operate the task.
- Terminal packages upgrade triggers re-configuration of all devices with embedded, not just devices using upgraded package.
- Prologue/epilogue settings of Email/Web queue lost after upgrade from 8.2 patch 9.
- Vouchers are invalid if email is used as username.

## Device Certification

- Ricoh IM C6500 with embedded support added.
- Added support for Canon MF440 Series.
- Added support for HP LaserJet Pro M404n.

---

# 10.0 BETA

## Improvements

- **NEW FEATURE** New Web UI skin.
- Job parser - Improved detecting print job paper size from PDF.
- Apache updated.
- PHP updated.
- Easy Config - Main window is shown immediately after the splash screen has been closed.
- File statsData.xml added to Data for Support.
- Job parser updated.
- Reduced RAM usage of Job parser.
- **NEW FEATURE** Added option to release user's blocked credit and quota on user right-click menu.
- Possible to change grayscale tolerance in config.ini.
- New process of detecting and setting print parameters.

- **NEW FEATURE** BI tools integration.
- Added option to enable debug log level settings into printer properties.
- Easy Scan email body and subject can use parameter %empty% to remove email subject or email body.

## Changes

- Custom Web UI themes are not longer supported.
- **SYSTEM REQUIREMENT** Upgrade to 10.0 is possible only from 8.2.
- Removed support of Easy Cluster.
- Firebird database password characters restricted to only characters allowed by Firebird.
- Added OCR engine parameters to config.ini.

## Bug Fixes

- Cost Centers - Accounting group is always user's default group.
- Exported CSV with printers shows error in the log after importing CSV back.
- Jobs - Office formats - Change of method is not applied (requires restart of services).
- Releasing job with punching - When user prints the job from Job properties table on Embedded terminal, job is always printed without punching.
- Missing translation [en:License.enter\_activation\_key] for manual activation.
- Quota - print job (bw+color pages) allowed when Color + Mono quotas are monitored and only bw or color quota is remaining.
- Easy Config - incomplete Network path for DB backup folder when path is set in Task Scheduler.
- LDAP user synchronization - Cannot create user sub-group by using "|" (pipe) in attribute field.
- Database password with special characters causes services crash.
- Quota boost - cannot boost quota for user group.
- Search in Settings > Printer Discovery finds wrong Printer Discoveries.
- Audit log scheduled export - Invalid default format.
- Parameter %http://SUPPLY.INFO % does not work on Ricoh printers.
- Google drive can't be registered on multiple site servers.
- Generating new PIN throws an error message in MyQ log.
- Database upgrade could fail, if database contains certificate with comments.
- Easy Config does not start after restart on some PCs (Windows 11 arm).
- Login in MyQ Desktop Client could be prompted for jobs sent to Queue with different user detection method.
- Configuration profile - after selecting terminal type, SNMP is set back to default.
- Opening Easy Config manually after required restart after Print Server upgrade interrupts automatic database upgrade.
- Certificate change is not propagated into IPP server (IPPS Printing).
- Settings - Opening a pricelist from Pricelist tab in Printer Discovery - Actions caused incorrect Web UI behavior.
- Specific characters can't be contained in Admin password.
- Print server stops when provided with expired support license.
- Internal code list - Inherited rights multiplied during Code Book edit.
- Modifying job properties was not applied during job release.
- Pricelist could not be removed from Configuration profile.
- Parsing error (Undefined) of some specific jobs.
- MS Universal Print - Presented multi-factor authentication has expired. Pinter had to be re-created.
- HP Embedded with small display - "Terminal service not running" screen has wrong (cut off) layout.
- Change description for setup in Easy Config.
- Lexmark Embedded - Scan doesn't work (requires also Lexmark terminal 8.1.3+).

## Device certification

- Canon iR-ADV 4751 - corrected counters.

- Added support for Xerox VersaLink C500.
- HP E60055 - fixed sn displayed in Web UI.
- Added support for Ricoh SP C340DN.
- Added support for HP Laser MFP 432.
- Added support for Canon iR-ADV C3822/26/30/35.
- Added support for Toshiba e-Studio448S and 409S.
- Added support for Xerox VersaLink C505.
